

**Are you Lacking Functionality in Your  
Current Phone System?**

**Are You Overspending for Phone  
Service?**

**Would You Like to Decrease Your Time  
Supporting Technology?**

Since deploying the first IP Phone System in Ohio in 1999, NetGain has become a leader in bringing cutting edge technology to west-central Ohio. Launched in 2009, NetGain's Managed IP PBX system—powered by Cisco—has been utilizing all the benefits and redundancy of local cloud technology, while providing the scalable enterprise system you need on a small business budget. Our team will complete a comprehensive analysis of your current phone bills to identify unnecessary lines and work with your current provider to complete the cutover process.

**Centralized and Shared System**

Free up your internal resources – personnel and physical – by shifting the accountability to the DataForce 24x7 team. Increase your physical rack space while decreasing your utility bills by allowing us to house the equipment.

Our team will monitor our fully redundant equipment that is critical to not only your organization, but mission critical agencies in the community, as well as our own.

Moves and changes can be completed in a matter of minutes by calling our 24x7x365 Service Desk, staffed by real people and located in your backyard.

**Fiber makes the Difference**

There is no chance your call quality will decrease due to lack of bandwidth. Our system is backed by 100% redundant business-class fiber-optics—no copper—to ensure your calls are as crisp as a face-to-face conversation.

**Never Miss a Communication**

Advanced features allow the system to bring your desk phone with you wherever you may be. Incoming calls can be picked up on your mobile device, and transferred seamlessly between

it and your desk phone. Working away from your desk? Voicemail messages can not only be received by desk phone, but cell phone notification and e-mail integration as well. If working from another desk, log into the phone with Extension Mobility, bringing critical resources with you, without packing up your phone.

**Directory Access**

Different directories provide access to your contacts with the touch of a button. The Personal Directory stores your organization's users and your custom Address Book, while the Corporate Directory stores users from the entire system.

**Customizable**

Expand your organization's branding from print to audio/visual. Outside agencies can create custom messaging and/or music to add to your lines when recorded in a supported format. If you're not interested in custom, select a track from our library. Our technicians can also create custom wallpaper with your logo to put your best foot forward when meeting with prospects.

Additional customization is available down to the user level by selecting different ring tones to differentiate phones and elevate confusion.

To learn more about this truly state-of-the-art system, please call us. We'll demonstrate our system and discuss the advantages of Managed IP PBX for your organization.
