

Are Your Voice, Data, and Video Systems Giving You Headaches?

Are You Over-Spending for Long Distance, Internet and Phone Service?

Would You Like to Reduce Your Support Costs?

Let NetGain unify and simplify your communications. At NetGain, bringing your voice, video and data communications together onto a single highly-efficient, Internet Protocol (IP) based network is the cornerstone of what we do; which allows you to provide advanced unified communications that drive down your organization's costs and increases your revenues. A Unified Communications platform allows your staff to work anytime, anywhere; and provides an integrated, scalable solution that grows with your organization.

Lower Total Cost of Ownership

A Unified Communications system provides a rich portfolio of voice, video, and IP communications solutions designed to facilitate efficient and effective interaction between your employees, partners, and customers, while providing the foundation for a collaborative workforce. By promoting greater levels of collaboration, these solutions can help your organization exceed customer expectations, outpace your competitors, and realize a measurable return on investment.

Depending upon your network topology, Unified Communications can reduce your local and long distance charges as much as fifty per cent; while providing your staff with ease of use, superior audio quality, and increased accessibility for people with disabilities, ergonomic physical design, advanced services, and features. But there are so many more advantages to unifying your network communications, including:

- **Infrastructure reductions**—go from multiple networks to one
- **Lower expansion costs**—it's all on a single, simple network
- **Lower hardware connection costs**—fewer switches, routers, wiring
- **Lower support costs**—fewer personnel required for support and service

Unified Messaging

IP Communications converges all communication—e-mail, fax, voice and video—into one easy to use, easy to access place. Best of all, your IP Communications solution is completely compatible with contact management packages such as ACT, Goldmine, and Outlook making your workforce more productive and efficient.

Your users can access, manage, and reply to all messages from a PC, telephone, cell phone or PDA from virtually anywhere.

Move, Add, or Change Voicemail Accounts in Minutes

Network administrators and IT departments love IP Communications because it makes their lives—and the lives of their users—much simpler. A user-friendly web browser is all you need to make time and money saving moves, adds and changes to any of your IP systems. If preferred, users can make the changes themselves. This frees up time for your IT personnel to focus on more critical support issues.

NetGain Brings it All Together

No other firm in the region offers the skill and experience of NetGain. In fact, we've been planning, designing and implementing Unified Communications systems since 1998. We are authorized and certified by the world's leading providers of VoIP products and services including Cisco Systems, IPcelerate, Cistera and all major voice application providers.

NetGain offers a comprehensive assessment of your existing network's ability to support integrated voice, data, and video. We'll perform a thorough review of your existing telephone company costs and offer realistic return-on-investment projections. We understand the complexities of migrating to a Unified Communications solution, so we make it easy with a detailed migration plan that includes hardware and software recommendations, timelines and training for your employees.

We'll use our technical expertise and high standards of excellence to implement your new Unified Communications solution. And, once up and running, we'll be there with our monitoring, operations and optimization services to ensure your system runs flawlessly.
