

**Your data is in one place.
Your staff isn't.
Keep them connected.**

These days, collaboration among diverse teams is critical. Being connected to your team in the field whether at client sites, home offices or airport terminals is essential. Access to information for rapid decision-making is a key element to success. Is your technology aligned with the needs of your people? How about your stakeholders?

NetGain Wireless Communications connects your workforce with the power of real-time anytime/anywhere data for increased productivity and faster response times.

Immediate Access to Critical Data Anytime/Anywhere

Wireless technologies are enabling higher levels of performance and productivity than ever thought possible. With secure wireless solutions your organization is no longer bound by geographic constraints, in the office or on the road. You can create a virtual, private network of computers, PDAs and mobile devices inside your office, across town or around the globe, using any of NetGain's public carrier partners—Sprint/Nextel, Cingular or Verizon Wireless.

With a NetGain Wireless Communications solution, your organization can achieve 24/7 real-time network access, instant messaging, data transfer, and voice services to meet the demands of an increasingly competitive market.

The Advantages of Wireless Networking

Wireless networking offers distinct advantages that are certain to benefit any small to medium-sized business or organization:

- **Anytime, anywhere access** to information promotes collaboration with colleagues, business partners, and customers
- **Real-time access** to instant messaging, e-mail, and network resources boosts productivity and speeds business decision making

- **Mobility** services such as voice, guest access and advanced security let you develop new applications that transform business operations
- **Simultaneous** tracking of all wireless devices for location-based security, high-value asset tracking, and business policy enforcement
- **Lower implementation and maintenance costs** because wireless networks are cheaper, easier and faster to deploy

Move Beyond Basic Connectivity

The network can do much more than move data. Today, companies of all kinds are using intelligent networks to: reshape operations and business processes; restructure communications; redefine customer service; and re-engineer security. An intelligent network improves the efficiency of everything it touches—from business processes and applications to network services—allowing your organization to quickly tackle its most important goals.

Optimized for Your Success

We invite you to learn whether Wireless Communications solutions are right for your organization by taking advantage of our complementary two-hour consulting service to review your technology, analyze your needs and make an unbiased recommendation on how best to proceed.

If you'd like access to critical data anytime/anywhere, want to increase worker mobility and productivity, and improve response times, please give us a call.
